Shawamekh Al Jazeera for Safety Systems & Equipment

SINGLE SOURCE. SIMPLICITY. PEACE OF MIND.

Shawamekh for Safety Systems & Equipment is a leading fire protection company in Saudi Arabia. Businesses, government, factories, and warehouses turn to us for end-to-end fire protection services because of our 9 years' experience, our 20 fire safety professionals, and our famous "customer first" reputation.

SASSECO provides full fire protection services including system design, sales, installation, inspection, maintenance, and repair.

FULL-SERVICE FIRE PROTECTION INSPECTIONS. TESTING. SERVICE. SALES.

• **WHY CHOOSE SASSECO?**

SASSECO has over 7 years of experience providing complete fire protection services for businesses, organizations, government buildings and Factories in Saudi Arabia. Our number one focus is your safety – we want to make sure your employees, property and valuables are safe from the dangers of potential fires. We take pride in our "customer first" reputation and will do whatever it takes to make sure your property and valuables are protected from fire hazards and that your building meets fire safety codes.

The best thing about partnering with SASSECO is that we are your single source solution for all fire protection services. Our experienced fire safety professionals specialize in all aspects of fire protection – from fire suppression system design and engineering, to sales, installation, testing and inspection, maintenance, and repairs; from fire sprinklers, fire pumps and commercial kitchen fire suppression to fire alarms, extinguishers and emergency exit lighting – we do it all!

If you are located Anywhere in Saudi Arabia and want to learn more? Call us today to speak with one of our experienced fire safety professionals and discover why top names in business and government consistently recommend SASSECO.

About Us | Why SASSECO?

The **SASSECO** success story is written everyday by over 20 dedicated professionals who build on our long track record of single-source solutions and satisfied customers.

LEADERSHIP

Based in **Al Dabab Street- Riyadh**, **SASSECO** for Safety Systems Services is a leader in fire protection services – serving Riyadh and other Cities for over 7 years.

DEDICATION

Our team of fire safety professionals design installs and maintains fire alarms, sprinkler systems, extinguishers, kitchen hood/ventilation systems, and suppression systems.

DEPENDABILITY

We service, inspect, test and repair fire systems throughout the region. Top names in business and government turn to SASSECO for their end-to-end fire protection needs.

FOCUS

Our focus on safety and service has convinced the fire protection industry's leaders to partner with us. Our commitment to safety is further demonstrated by numerous professional accreditations.

SUPPLIERS SASSECO WORKS WITH

- Simplex
- ZETA
- ESSER
- GENT
- FIKE
- SAFETY HI-TECH
- SFFECO
- AL SABEH

SASSECO professionals are ready to support your organization's fire protection systems and service requests 24 hours a day. Call now for more information

Fire Suppression Special Hazards

Inspection | Testing | Service | Sales

Most enterprises operate with expensive technology and equipment. If it is mission-critical, you need to protect it. SASSECO offers a broad range of fire suppression solutions that are customized to address special hazards.

SYSTEM RESPONSE

Our systems quickly detect and suppress fires to minimize damage, clean-up, and downtime. Such systems are typically used to protect...

- Financial records
- Data storage and computer rooms
- Electrical Rooms
- Industrial equipment
- Health care records
- Collectibles
- Historical sites

SASSECO ensures your system is tested and ready to go when we turn it over to you. We train your employees to understand the proper operation and maintenance requirements to keep your system in optimal operating condition.

INSPECTIONS AND MAINTENANCE

SASSECO will provide the inspection and maintenance schedule to keep your system in compliance. We keep accurate inspection and maintenance records that are required by **NFPA** and **Civil Defense** Standards. We provide immediate response to system discharges whether accidental or from a fire to get your system back into service as quickly as possible.

- [Test and clean all detectors](#)
- [Verify shutdown and evacuation circuits](#)
- [Verify cylinder pressures and weights](#)
- [Check for changes in hazard integrity](#)
- [Check input and output circuit supervision](#)
- [Simulate system discharge and test releasing circuits](#)
- [Visually inspect agent piping and nozzles](#)
- [Check hydro test dates for cylinders and discharge hoses](#)

SASSECO professionals are ready to support your organization's fire protection systems and service requests 24 hours a day.

FM-200 Systems

FM-200 (FM200) - inspection, testing and service

FM-200 Inspections & Maintenance

SASSECO for Safety Systems will provide the inspection and maintenance schedule to keep your system in compliance. We keep accurate inspection and maintenance records that are required by **NFPA** and **Civil Defense** Standards. We provide immediate response to fire suppression system discharges whether accidental or from a fire to get your system back into service as quickly as possible.

- [Check hydro test dates for cylinders and discharge hoses](#)

SASSECO Fire professionals are ready to support your **Riyadh** Area organization's and Anywhere in **Saudi Arabia** fire protection systems and service requests 24 hours a day.

FM 200 Recharge

Do you need FM 200 recharge? Call "SASSECO" **Shawamekh for Safety Systems and Equipments**! We offer FM 200 reclamation and recharge services to ensure that your building is kept safe from fires always. If your fire suppression system has recently discharged and you need FM 200 recharge service, call **SASSECO** today!

Mission Critical Equipment Requires Special Fire Suppression Considerations

Many fire suppression systems can damage or destroy the very equipment they are meant to protect. Sensitive computer, electronic and telecommunications equipment – like that found in data centers, telecommunication facilities and other tech businesses — require special fire suppression considerations and advanced care. If your building houses mission critical electronics and you have limited space, consider FM 200 and NOVIC 1230 alternative waterless fire suppression systems that is specifically designed to protect sensitive computer, electronics and telecommunications equipment.

How FM-200 Works

FM-200 is a clean agent fire suppression system designed specifically to protect sensitive electronic equipment. FM-200 stops fire fast using a combination of chemical and physical mechanisms. FM-200 discharges gas (1,1,1,2,3,3,3-Heptafluoropropane) directly onto the surface of combustible materials. Heat is absorbed from the surface of the burning material(s), thereby lowering the material's temperature below the ignition point.

FM-200 deploys quickly and cleanly – it won't leave behind oily residue, particulate or water. FM-200 is one of the fastest suppression systems available; its extinguishing levels are typically reached in ten seconds or less. This extreme speed results in less damage, lower repair costs and shorter downtime - not to mention a greater window of safety for any people that may be involved in the fire.

Typical Customers Using FM-200 Systems

FM-200 can be safely used where people are working and present. It is used as a propellant in pharmaceutical inhalers that dispense asthma medication! Common environments using FM-200 for fire suppression are businesses, government buildings, universities, hospitals, museums and many others. Worldwide, over 100,000 systems have been installed to date. The FM-200 agent is stored in cylinders as liquid. Pressurization is achieved using nitrogen which saves massive amounts of storage space. FM-200 takes up to seven times less storage space than systems based on CO2 and inert gases. When discharged, the liquid flows through a network of piping into the protected area where it vaporizes.

Learn More about FM-200 - Contact the Professionals at SASSECO for Safety Systems

Using the wrong type of fire suppression system in a telecommunications or data center Environment can cause major damage. SASSECO offers a variety of cutting-edge fire suppression systems including FM-200 for companies in **Saudi Arabia**.

To learn more about FM200 or how "**SASSECO**" **Shawamekh for Safety Systems and Equipments** can help your businesses contact us today!

CO2 Fire Suppression System

CO2 – Sales, installation, inspection, testing and service

Carbon dioxide or **CO₂** is a colorless, odorless, electrically non-conductive gas...that's highly efficient as a fire suppression agent. **Carbon Dioxide** fire protection systems use intelligent, reliable and fast-acting control panels to quickly sense a fire before it can cause damage to property. Carbon dioxide gas has a high rate of expansion, which allows a **CO₂** fire protection system to work fast.

When applied to a fire, CO₂ provides a heavy blanket of gas that reduces the oxygen level to a point where combustion cannot occur. Since carbon dioxide is a gas, there is no clean-up associated with a **CO₂** fire suppression system discharge...that's minimal interruption to your business! In fact, the cost of clean-up and peripheral damage associated with water sprinkler systems, foam systems, and dry chemical agents can exceed the costs associated with the actual fire damage. With a **Carbon Dioxide** system, clean up costs and downtime associated with a CO₂ discharge are negligible.

CO₂ fire suppression system is extremely versatile, effective on a wide range of flammable and combustible materials and approved for Class A, B, and C hazards.

Carbon Dioxide fire protection systems are available for use in total flooding or local fire protection applications - making it an effective fire protection system for a wide variety of hazards.

Applications:

- Liquid Storage Areas
- Mixing Operations
- Spray Booths
- Turbine Driven Generators
- Electrical areas
- Dust Collectors
- Engine Rooms

NOVEC 1230

Sales, installation, inspection, testing and service

NOVEC 1230 is the next generation of chemical fire suppressant in place of FM200 which a market leader for the exchange of Halon was. NOVEC 1230 and its use in marine applications is approved by several marine agencies around the world and has been fully tested in accordance with the International Maritime Organization MSC/Circ.848 on revised guidelines for the approval of fixed gas fire extinguishing systems, as referred to in SOLAS 74 for machinery spaces and cargo pump rooms.

NOVEC 1230 systems are designed to extinguish fires involving flammable liquids, gases and electrical equipment. NOVEC 1230 extinguishes fires by a combination of physical and chemical means. It does not significantly deplete the oxygen content in the room and tests have shown it to be less toxic than Halon 1301.

NOVEC 1230 contains no bromine or chlorine and therefore has an ozone depleting potential of zero. The systems are individually designed, and appropriately sized storage cylinders chosen according to the hydraulics and quantity of agent required. The components are designed and tested to operate in the temperature range 0°C to 50°C. It is always preferred to store the cylinders out with the enclosure being protected but, in some circumstances, the certifying authority may agree otherwise with additional precautions.

NOVEC 1230 systems are designed to hold the NOVEC 1230 in the form of a liquid and Nitrogen which is used to super-pressurize the container to 24.8 bar (360 psi) at 20°C. When the system is activated the contents flow into the distribution pipe work to the discharge nozzle(s) where it is rapidly dispersed as a vapor (less than 10 seconds). During the discharge, the enclosure will be fogged which may reduce visibility. This normally clears rapidly and should not obstruct the ability of personnel to safely exit the protected area.

Under normal conditions NOVEC 1230 is a colorless and low odor fluid with a density around 11 times that of air. It decomposes at temperatures more than 500°C and it is therefore important to avoid applications involving hazards where continuously hot surfaces are involved. Upon exposure to the flame, NOVEC 1230 will decompose to form halogen acids. Their presence will be readily detected by a sharp, pungent odor before maximum hazardous exposure levels are reached. It has been concluded from fire toxicity studies that decomposition products from the fire itself especially carbon monoxide, smoke, oxygen depletion and heat may create a greater hazard.

The successful performance of a gaseous total flooding system is largely dependent on the integrity of the protected enclosure. It is essential that a room integrity test is performed on any protected enclosure to establish the total equivalent leakage area and enable a prediction to be made of the enclosure's ability to retain NOVEC. The required retention time will depend on the particulars of the hazard, but MSC/Circ.848 states that this should not be less than 15 minutes. Longer retention times may sometimes be necessary if enclosures contain hazards that may readily become deep seated.

Micro mist Fire Suppression System

Effective water mist fire protection.

The Micro mist® fire suppression system produces a fine mist to extinguish fires quickly, with very little residual water. In fact, the Micro mist system releases 100 times less water than traditional sprinkler systems, yet effectively extinguishes the fire! That translates into fewer run-offs, less damage and easy clean-up.

The Micro mist fire protection system employs single fluid, intermediate pressure - which reduces installation and maintenance costs associated with redundant and high-pressure piping networks / fittings. Offered in two convenient cylinder size configurations, Micro mist is a self-contained (great for applications with or without an available water source), single-fluid, pre-engineered water mist fire suppression system and comes pre-assembled, tested and packaged with all necessary valves and actuation components for system operation, (system nozzles must be ordered separately). That is portability, reliability and simple installation in one easy package!

In addition, the Micro mist system does utilize water, so it is naturally environmentally safe, non-toxic, and people friendly. Combine Micro mist with the intelligent, peer-to-peer speed of the Cheetah Xi detection and control system and you have a cost-effective, fast fire protection system, ideally suited for total compartment protection of machinery spaces, compartmentalized gas turbine generators (FM approved) and many other applications.

Fire Alarm System Services

Inspection | Testing | Service | Sales

One of the most important fire protection systems you can install in your building is a fire alarm. A fire alarm system is one of the best ways to alert your employees and coworkers of a fire, so they can quickly get to safety. It is important to keep your fire alarm system up to code to ensure it works properly always. As a result, quarterly fire alarm system inspections are critically important. If you are due for a fire alarm system inspection, call **"SASSECO"** Shawamekh for Safety Systems and Equipments today!

Why are Professional Fire Alarm System Inspections Important?

We Keep You Up to Code

To ensure their reliability, fire alarm systems must be inspected, tested and maintained. **"SASSECO"** will set up a service program for periodic testing, inspection and maintenance that conforms to:

- NFPA code requirements
- Local authorities having jurisdiction (Civil Defense)
- System manufacturer's recommended inspection and maintenance requirements
- Required Annual Fire Alarm System Testing

Fire alarm systems consist of much more than smoke detectors on the walls or ceilings or a fire enunciator panel in the front of your building. Many elements of fire alarm systems are kept out of sight, so you might not be able to check them every day. During a routine quarterly fire alarm system inspection, the various components of your fire alarm system are exercised and tested to make sure they're all-in good working order. That would include all of the manual pull stations, alert/alarm methods (strobes and horns), smoke and heat detectors, exit/emergency signs and lights, duct detectors, enunciator panels, the main alarm panel and any communications sub-panels and battery backup supplies.

Fire Alarm Replacement

If a fire alarm inspection turns up any alarms that are no longer working properly, it's extremely important you have them replaced right away. Faulty fire alarms or alarms that go off in the wrong places are some of the most common causes of death in buildings with fire alarms. Your **SASSECO fire alarm inspection technician** will be able to provide fire alarm replacement for all your nonworking fire alarms. Do not get caught unprotected – if you need fire alarm, call **SASSECO** today!

What Else Does a Fire Alarm Inspection Include?

- Every fire exit will be checked to make sure the doors are easy to open and there are no objects blocking the exits. In addition, the fire alarm system inspection technician will check to make sure every emergency exit door is conspicuously marked, so people will have no trouble finding it.
- Our fire alarm inspection technician will check to make sure there are enough emergency exits in your building and it does not exceed its maximum occupancy. Making sure the number of emergency exits is sufficient for people in your building is critical as an emergency situation is likely to trigger a stampede otherwise.
- The fire alarm inspection technician will check to make sure there are no highly flammable substances near your building. If flammable materials are essential to your building's function, the fire alarm system inspection technician will make sure they are stored away from high-risk areas.
- A fire alarm inspection technician will check to see if your fire extinguishers and fire alarm pull stations and devices are in the proper places, so people can get to them right away in the event of a fire.
- In addition to fire extinguishers and fire alarms, a fire alarm inspector will check to see if your fire sprinkler heads are in the proper areas and are spaced out properly.

Having a working fire alarm system installed in your building saves lives. According to the NFPA, properly maintained fire alarms increase the chance of survival by as much as 50%! If you want to ensure the safety of your building, coworkers, and employees by having a fire alarm system inspection, call **"SASSECO" Shawamekh for Safety Systems and Equipments** today!

SASSECO professionals are ready to support your organization's fire protection systems and service requests 24 hours a day. Call now for more information.

Fire Alarm Maintenance & Testing

When it comes to keeping your employees safe from fires, nothing does the job better than a well-maintained fire alarm. Fire alarm maintenance and testing is one of the most important things you can do to keep your fire alarms safe and operational always. If you need fire alarm maintenance, call the experts at **SASSECO**!

Fire Alarm Maintenance & Testing You Can Count On

At **SASSECO**, our expert fire alarm maintenance technicians' number one goal is to make sure your fire alarms are fully operational always. We can provide fire alarm maintenance for any brand of fire alarm, including:

- Zeta
- Gent
- Simplex
- Fike

No matter your fire alarm maintenance needs, go to the fire alarm maintenance experts – call **SASSECO** today!

Why Call Shawamekh for Fire Alarm Maintenance and Testing?

SASSECO has over 7 years of experience providing complete fire protection services for businesses, organizations, government buildings and restaurants in **Riyadh**, and many Cities in **Saudi Arabia**. Our number one focus is your safety – we want to make sure your employees, property and valuables are safe from the dangers of potential fires. We take pride in our “customer first” reputation and will do whatever it takes to make sure your property and valuables are protected from fire hazards and your building meets fire safety codes.

The best thing about partnering with **SASSECO** is we are your single source solution for all your fire protection services. Our experienced fire safety professionals specialize in all aspects of fire protection – from simple fire extinguisher replacement to fire suppression system design and engineering; sales, installation, testing and inspection; maintenance and repairs; from fire sprinklers, fire pumps and commercial kitchen fire suppression to fire alarms and emergency exit lighting – we do it all!

Located in Riyadh, Shagraa or anywhere in Saudi Arabia and want to learn more? Call us today to speak with one of our experienced fire safety professionals and discover why top names in business and government consistently recommend SASSECO for fire alarm maintenance and testing!

Fire Alarm Inspection & Testing

Fire sprinklers and fire extinguishers are extremely important for keeping your building safe from fires, but when it comes down to it, nothing beats a well-maintained fire alarm system. Keeping up with regular fire alarm inspection and testing is the most important thing you can do to make sure your fire alarms are safe and operational always. If you own or manage a building in **Saudi Arabia** and need fire alarm inspection to keep your employees, tenants or guests safe, call the fire alarm inspection experts at **SASSECO**!

Reliable **Riyadh and Shaqraa** Fire Alarm Inspection& Testing

At **SASSECO**, our expert fire alarm inspection technicians' goal is to make sure your Riyadh and Shaqraa building's fire alarms are fully functional always, so they can keep your employees safe. We can inspect all brands of fire alarms, including:

- Zeta
- Gent
- Simplex
- Fike

Whatever your fire alarm inspection needs, go to the fire alarm inspection experts – call **SASSECO** today!

Why Call SASSECO for Fire Alarm Inspection and Testing?

SASSECO has over 7 years of experience providing complete fire protection services for businesses, organizations, government buildings and restaurants in **Riyadh, Shaqraa** or Anywhere in **Saudi Arabia**. Our number one focus is your safety – we want to make sure your employees, property and valuables are safe from the dangers of potential fires.

We take pride in our “customer first” reputation and will do whatever it takes to make sure your property and valuables are protected from fire hazards and your building meets fire safety codes.

The best thing about partnering with **SASSECO** is we are your single source solution for all fire protection services. Our experienced fire safety professionals specialize in all aspects of fire protection – from simple fire extinguisher replacement to fire suppression system design and engineering; sales, installation, testing and inspection; maintenance and repairs; from fire sprinklers, fire pumps and commercial kitchen fire suppression to fire alarms and emergency exit lighting – we do it all!

Located in **Riyadh, Shaqraa** or Anywhere in **Saudi Arabia** and want to learn more? Call us today to speak with one of our experienced fire safety professionals and discover why top names in business and government consistently recommend **SASSECO** for fire alarm inspection and testing!

Fire Sprinkler Systems

In your building, your fire sprinkler system is the single most important fire protection system you can have. Fire sprinkler systems respond to fires in seconds, often putting them out completely or at least knocking them back until the fire department arrives. There are many different types of fire sprinkler system available, each one designed to protect a different type of building. At **SASSECO**, we provide full fire sprinkler installation – from piping and fire sprinkler head installation to electrical and plumbing hookups. If necessary, we can even install new water main and sewer lines or construct a new pump room in your building!

Types of Fire Sprinkler Systems

At **SASSECO**, we can install any type of fire sprinkler system in your building, including:

Wet Pipe Fire Sprinkler Systems – the most used type of fire sprinkler, wet pipe fire sprinkler systems are a type of sprinkler system that uses automatic sprinkler heads attached to a piping system that comes pre-charged with water from the fire pump. With this type of fire sprinkler system, the fire sprinkler heads open in response to heat and water is discharged instantly after the heads open.

Wet pipe fire sprinkler systems are commonly found in typical office buildings and provide a standard level of fire protection.

Dry Pipe Fire Sprinkler Systems – a dry pipe fire sprinkler system uses fire sprinkler heads that are attached to pipes filled with pressurized air as opposed to water. When the sprinkler heads open, the gas is released, and a valve is opened allowing pressurized water to flow through the pipes and out the open sprinkler heads. While this causes a slight delay in water discharge, it is useful in buildings where water could freeze if kept in the pipes.

Dry pipe fire sprinkler systems are less common than wet pipe fire sprinkler systems because they are more expensive and more complicated. However, they are very useful in certain situations, such as in unheated buildings, parking garages and refrigerated coolers where temperatures get cold enough that water could freeze in the fire sprinkler pipes.

Deluge Fire Sprinkler Systems – a deluge fire sprinkler system uses open fire sprinkler heads attached to a piping system which is itself connected to a water supply by a valve. When the smoke or fire alarm goes off, this valve open and sends water through the pipes and sends water through all of the sprinkler heads at once. Deluge fire sprinkler systems are used in applications where fires could spread quickly unless massive quantities of water are delivered as quickly as possible.

Pre-Action Fire Sprinkler Systems – pre-action fire sprinkler systems are basically a combination of a deluge fire sprinkler system and a wet pipe fire sprinkler system – water

enters the pipes via a valve and flows through the sprinkler heads when they are activated by heat.

They are commonly used in spaces containing expensive and valuable equipment that could be damaged by the accidental triggering of the sprinklers.

No matter what kind of building you need to protect, there is a fire sprinkler system for you and **SASSECO** can install it. If you need to install a wet pipe, dry pipe, deluge or pre-action fire sprinkler system in your building, call **SASSECO** today!

SASSECO professionals are ready to support your organization's fire protection systems and service requests 24 hours a day. Call now for more information.

Fire Sprinkler System Installation

Inspection | Testing | Service | Sales

Is your building being protected by a fire sprinkler? If not, call **SASSECO**! We are the fire sprinkler installation experts and have over 7 years experience providing complete fire protection services for businesses, organizations, government buildings and restaurants throughout **Saudi Arabia**.

Types of Fire Sprinkler Systems

When you are thinking about fire sprinkler system installation, you have several options – each will afford you a slightly different level of fire protection suitable for different types of buildings.

Wet Pipe Fire Sprinkler Systems – by far the most common type of fire sprinkler, wet pipe fire sprinklers are found in most homes and standard office buildings. In a wet pipe fire sprinkler, water is kept under pressure and stored throughout the sprinkler pipes and released by heat-activated sprinkler heads. The advantage of having a wet pipe fire sprinkler system is that they activate instantly with no lag time after the fire sprinkler heads open.

Dry Pipe Fire Sprinkler Systems – dry pipe fire sprinkler systems are similar to wet pipe, except the water is not stored in the pipes. Instead, the pipes are filled with pressurized air or nitrogen gas. When the sprinkler heads open, the gas is released, and a valve opens that allows water to flow out through the open fire sprinkler heads. This causes a slight delay (usually only a second) in water discharge, but it is useful in buildings where water could freeze if kept in the pipes.

Deluge Fire Sprinkler Systems – a deluge fire sprinkler system is very similar to a wet pipe fire sprinkler system, except the fire sprinkler heads are kept open always – they are not activated by heat. Deluge fire sprinkler systems are operated by a special fire alarm that opens a valve to release the water when activated. Once the valve opens, it must be shut off manually.

Because of the potential for water damage, deluge fire sprinklers are not commonly found in homes or offices. Instead, they are used in places where rapid fire spread is a concern. You will most commonly find deluge fire sprinkler systems near high rise windows, warehouse bay entries or anywhere else where a fire could escape quickly.

Pre-Action Fire Sprinkler Systems – a pre-action fire sprinkler system is basically a combination of wet pipe and dry pipe fire sprinkler system. Basically, water is not stored in the pipes until a fire detection device detects a fire. At this point, the detection device opens a valve to let the water in before the sprinkler heads open. When the heads open, the pre-action fire sprinkler system reacts as quickly as a wet pipe fire sprinkler system.

Pre-action fire sprinkler systems are best suited for areas that are at high risk for serious water damage in the event of accidental fire sprinkler activation.

If you need fire sprinkler installation in your building.

Fire Sprinkler Repair

There is nothing more crucial to your fire safety than having your fire sprinkler repaired as soon as you find a problem with it. At **SASSECO**, we have a variety of fire sprinkler repairs and services available, including:

- Above ground fire sprinkler repair
- Underground fire line repair
- Backflow preventer replacement
- Steel, CPVC and ductile iron fire sprinkler services
- Sprinkler valve repair and replacement
- Hydrant repair and replacement
- Fire sprinkler piping repair
- Tamper switch repair and replacement
- Flow switch repair and replacement
- Fire pump repair and replacement
- Pump controller repair and replacement
- Fire sprinkler inspection repair

We can also add or move fire sprinkler heads or change your sprinkler heads out.

At **SASSECO**, we can service any type of fire sprinkler system, including wet pipe, dry pipe, deluge and preaction. We offer 24-hour emergency fire sprinkler repair service, so we can keep your fire sprinkler operating safely any time, day or night.

SASSECO professionals are ready to support your organization's fire protection systems and service requests 24 hours a day.

Fire Pump Testing and Inspection

Do you know if your fire pump is fit to protect you, your employees and your building in the event of a fire? The fire pump is a critical piece of a building's fire sprinkler system, delivering water to the sprinkler heads in the event of a fire – however, since most people don't see it every day it is easy to not think about. Regular fire pump inspection and testing is required to make sure your fire sprinkler system will be able to protect your building in the event of a fire. If your building needs fire pump inspection, call **"SASSECO" Shawamekh for Safety Systems and Equipments** today.

Fire Pump Inspection

Like all other fire protection systems, fire pumps can lose their effectiveness if they are not properly maintained. Because they are so complex, fire pumps are especially vulnerable to things like corrosive environments, tampering, accidental damage and careless use. Since fire pumps are typically kept out of the way and (hopefully) are not used very often, fire pump inspection is extremely important to making sure the pumps will react the way they are supposed to. At **"SASSECO" Shawamekh for Safety Systems and Equipments** Services, our quarterly fire pump inspection services include:

- Pump head, valves and flow switch inspections
- Inspection of tamper switches, which send a signal to the main fire alarm control panel if a valve has been closed
- Inspection of flow switches, which start the water flow and trigger the alarms in the event of a fire

In addition, our annual inspections include fire pump pressure testing to ensure that your fire sprinkler system will be able to get the required amount of water into your building in the event of a fire.

Fire Pump Testing

In addition to fire pump inspection, **"SASSECO" Shawamekh for Safety Systems and Equipments** Services also offers fire pump testing. Weekly fire pump testing at shutoff conditions (with no water) are recommended, and annual fire pump testing at various load levels are a must. In addition, hose streams and flow meter systems should be tested every three years.

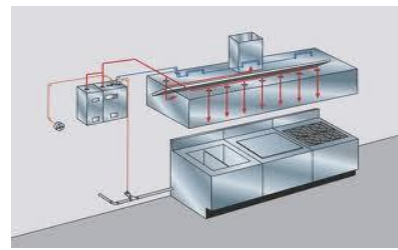

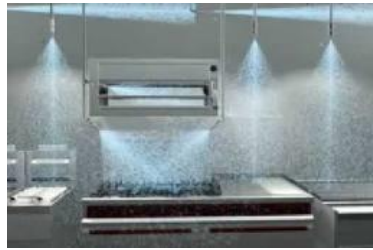

Fire Pump Maintenance

Fire pumps must undergo regular preventative maintenance to ensure that they maintain their effectiveness. **Shawamekh for Safety Systems and Equipments** Services offers fire pump maintenance services, including lubrication and coupling alignment.

Routine fire pump inspection and maintenance are extremely important to ensuring that your fire Protection system will keep your building safe from fire always. If you want to schedule a fire pump inspection.

Commercial Kitchen Hood System | Kitchen Fire Suppression

Kitchen Fire Suppression System Installations | Sales

When you run a busy kitchen in Anywhere in Saudi Arabia, the survival of your business depends on your kitchen fire suppression system's ability to quickly detect and suppress fires. Between the grease, the heat and the fast-paced working environment, kitchen fires can flare up at any time and without a reliable kitchen fire suppression system they can be potentially disastrous. Don't gamble with the safety of your restaurant, your employees and your guests – if you want to install a kitchen fire suppression system, call SASSECO today!

TOTAL KITCHEN FIRE SUPPRESSION SYSTEM EXPERTISE

SASSECO provides total system expertise for all your kitchen fire suppression needs. Our in-house kitchen fire suppression system experts bring together all the elements you need for fully integrated kitchen hood ventilation and fire protection systems in your commercial kitchen.

When it comes to commercial kitchen exhaust and ventilation, we do it all – from start to finish. Individual source is why the top names in food service and hospitality throughout Saudi Arabia depend on SASSECO for all their kitchen fire suppression system needs.

- “SASSECO” FIRE SINGLE SOURCE
- Detailed Consultation
- Engineering Services
- Design and CAD drawings
- Plans, Permits, and Approvals
- Residential Fire Suppression Systems
- On-Site Coordination | Installation
- Test and Balance | Final Inspection

Don't let a simple flash fire cost you everything. If you own a restaurant in Riyadh or in Anywhere in Saudi Arabia and want to design and install a kitchen fire suppression system, call SASSECO for Safety Systems Service today!

SASSECO Professionals are ready to support your organization's fire protection systems and service requests 24 hours a day. Call now for more information.

Emergency Lighting

Inspection | Testing | Service | Sales

If there were a fire in your building, would your emergency lights be able to direct your employees as they escaped? Sometimes the panic that can arise from people not being able to find an exit can be even more dangerous than the flames themselves. Emergency lights and emergency exit lighting are essential for maintaining a safe workplace because they help keep order, prevent panic, enable safe movement and contribute to timely evacuation. If you need a fire protection services company to inspect or service your building's emergency lighting, call **"SASSECO" Shawamekh for Safety Systems and Equipments** Services today!

EMERGENCY LIGHTING IS AN ONGOING RESPONSIBILITY

Like all your fire protection systems, your emergency lighting needs to be regularly inspected and serviced so you can be sure it works properly at any time, even if the rest of the power goes out. Ensuring the operational readiness of emergency lighting is an ongoing responsibility – and LIFE SAFETY Code requirement.

A fire is dangerous enough – don't take the risk of not having adequate emergency lighting. **SASSECO** helps ensure emergency lighting batteries, battery charging systems, bulbs and other emergency exit lighting system hardware receive the attention they need for effective performance.

Exit Light Inspection

Just like any fire protection system, your exit lights need frequent inspection to ensure that they work properly. Exit lights are harder to monitor than most other parts of your fire protection system, because out of everything they're probably the last thing you'd expect to go wrong.

At **SASSECO**, our exit light inspection procedure includes:

- 90-minute full function exit light test
- Disconnecting the exit lights from the power supply for additional testing
- Checking the exit light batteries and lenses for salvation
- Cleaning the exit light and lenses if necessary
- Adjusting the exit light beam for proper alignment
- Placing an exit light testing label on each light and recording the test in a log

How often do you need exit light inspection and testing?

The NFPA requires two types of exit light inspection:

Monthly exit light inspection – run your exit lights for 30 seconds to make sure they work in the event of a power loss.

Annual exit light inspection – have a professional fire protection services company performs a detailed exit light inspection for not less than 90 minutes.

In addition, exit signs should be inspected, monthly and annually.

Monthly exit sign inspection – this one's easy – just look at your exit sign. If it's working, it's working. If not, call a fire protection services company to fix it.

Annual exit sign inspection – again, have a professional fire protection services company come out and perform a full-service exit light inspection.

Our regularly scheduled inspection, testing, and maintenance service gives you peace of mind...

- Your emergency lights will work even if the power goes out
- Facility security will be improved
- Emergency evacuation from your building will be safe
- Emergency lighting system downtime will be minimal
- Costs from injury and claims will be reduced

SASSECO professionals are ready to support your organization's fire protection systems and service requests 24 hours a day. Call now for more information.

2. Company Structure

SASSECO is part of a large group of companies with diversities from contracting, Trading, Light Current & several other fields. All works in harmony to achieve the required tasks & customer satisfaction.

Sales & marketing:

- ✓ All our sales force is reachable round the clock.
- ✓ All salesmen will give you budget prices within 2 Days.
- ✓ Can propose cost effective alternative offers, which will help you to meet your budget without affecting the quality.

Engineering:

- ✓ Optimize your design when you have a space problem or unexpected design change in your process.
- ✓ Do give a particular care for your AS BUILT drawings.

Operations & Services:

- ✓ All our Engineers & Technicians are well trained & Have professional experience to solve all your Problems.

Projects installation:

- ✓ We have the capability to handle the Systems Project from A to Z, from the time of order stage till the end of warranty period.

3. References Project List

S.N.	Client	Project	Value (SR)
1	General establishment for military industries -Al Kharj	Design, supply, installation, testing and commissioning of fire alarm system for (18) School with site work (network)	2,998,773.75 +10% 299,853.75
2	Rial state development fund- Maather Housing - Riyadh	Design, installation, testing and commissioning of fire alarm and firefighting systems.	6,289,999
3	Ministry of Defense- Strategic Missile Force- Engineering Management and Works – Riyadh branch.	Design, supply, installation, testing and commissioning of fire alarm system for all buildings in Riyadh branch with network	1,274,500
4	Ministry of Defense- Strategic Missile Force- Engineering Management and Works Apartment complex - Wadi Addawaser.	Design, supply, installation, testing and commissioning of fire alarm system for (187) Villa with site work (network)	2,452,170
5	Astra Factory – Al Kharj Industrial City	Design, supply, installation, testing and commissioning of fire sprinkler, fire hydrant and FM200 fire suppression systems (First Contract)	1,500,000
6	Ministry of Agriculture – Directorate of Agriculture. (Wadi Addawaser)	Supply, installation, testing & commissioning of fire alarm system + wet pipe sprinkler system + gas detection and control system.	1,440,000
